Emergency Notification Methods

The following methods may be used to notify the campus community of various emergencies that may impact students, staff, and faculty on the University of North Dakota campus.

The NotiFind system (http://und.edu/emergency-management/notifind.cfm) is UND’s emergency mass notification system that is capable of sending out emergency information to campus personnel (professors, students, employees, etc.) on the campus whenever any emergencies or crisis arise on campus. In case of a campus emergency, NotiFind will send out a message by email, telephone, or text. The system will only be used when there is a severe threat to public safety of the entire campus that has not been contained or controlled and when immediate action is required. For instructions on how to enter/update your NotiFind emergency contact information visit http://und.edu/emergency-management/_files/docs/notifind-instructions-3-2011.pdf

UND has four outdoor warning sirens that can be activated by the University or the City of Grand Forks. These sirens also have the capability to give voice instructions to help alert the campus to threats and give instruction on what to do. Sirens will be used to warn of tornados and lightning within five miles. Primarily, these warnings are only intended to be heard by people located outside. These sirens are located at Tulane Drive (north of Facilities parking lot), Centennial Drive (next to Babcock Hall), Second Avenue (northwest of Memorial Stadium), and Princeton Street (near the Wellness Center).

UND Emergency Management Website (http://und.edu/emergency-management/) is easily accessible and will provide information to all students, faculty, and staff on and off campus. It will provide campus-wide general emergency actions, announcements, incident updates, and inclement weather closings. The University of North Dakota’s official Website is also used to display weather closings and emergency event information (http://und.edu/).

UND Channel 3 allows emergency messages to be flashed across all University controlled television stations. The emergency screen capture may be utilized in conjunction with other campus emergency notification methods. FM-Radio Station KFMJ-FM 90.7 (Prairie Public) is also available to issue emergency statements to the campus community.
NOAA Weather Radio provides 24/7 all-hazard watches and warnings for incidents such as floods, tornados, thunderstorms, winter storms, train derailments, AMBER alerts, and terrorist attacks.
