EBOLA
What you need to know
Ebola virus is the cause of a viral hemorrhagic fever disease.

Countries Affected:
- Guinea
- Sierra Leone
- Liberia
- Nigeria

Early Symptoms:
- Fever
- Headache
- Diarrhea
- Vomiting
- Weakness
- Stomach pain
- Lack of appetite
- Unexpected bleeding
- Joint & muscle aches

Symptoms can appear from 2-21 days after exposure.
Ebola can only be spread to others after symptoms begin.

You can only get Ebola from touching bodily fluids of a person who is infected with Ebola, or from exposure to contaminated objects, such as needles.

- Centers for Disease Control and Prevention

If you traveled from Guinea, Sierra Leone, Liberia, or Nigeria in the last 21 days, Contact Student Health Services IMMEDIATELY for screening.
