

Due Sunday, May 3 at 10 PM

How to submit:

Save your document as a PDF file and upload to Blackboard under the “Learning Objective Assignment” tab. You may also submit images as supplementary information. Images must either be hand drawn or computer generated by you. Images from other sources will not count.

Details on the assignment:

Consider the Learning Objectives from Chapters 8, 9 and 10 (Learning Objectives 102 – 130, found in the Lessons folders for Week 14, 15 and 16). Write your own study guide for Exam 4. There are 29 Learning Objectives total, each worth 1 point in this assignment.

For full credit, each Learning Objective should contain:

- a) The number of the Learning Objective (102 – 130).
- b) A short (3 – 5 sentence) explanation of the Learning Objective in your own words.
- c) An example to emphasize the Learning Objective.

Examples must include at least one of the following:

- i) A hand-drawn or computer-generated image created by you, with all parts clearly labeled and an explanation of the significance of the image. If you need to include the image as a separate file, be sure to include the file name so I can find it in your submission. Any images that I can find through reverse image search will result in 0 points for the particular Learning Objective.

- ii) An example math problem written by you that addresses the Learning Objective. The example problem must be solved with all steps explained.

Your submission must include all 29 Learning Objectives for full credit.
