

Create a Recording and Publish to a Blackboard Course in YuJa

Students can create and publish a recording for a specific Blackboard course to YuJa by following the steps below.

1. Your instructor should have created a YuJa menu item in the course. Click on this link to pass you through to the YuJa software.
2. When in YuJa, click on the Create Recording button.

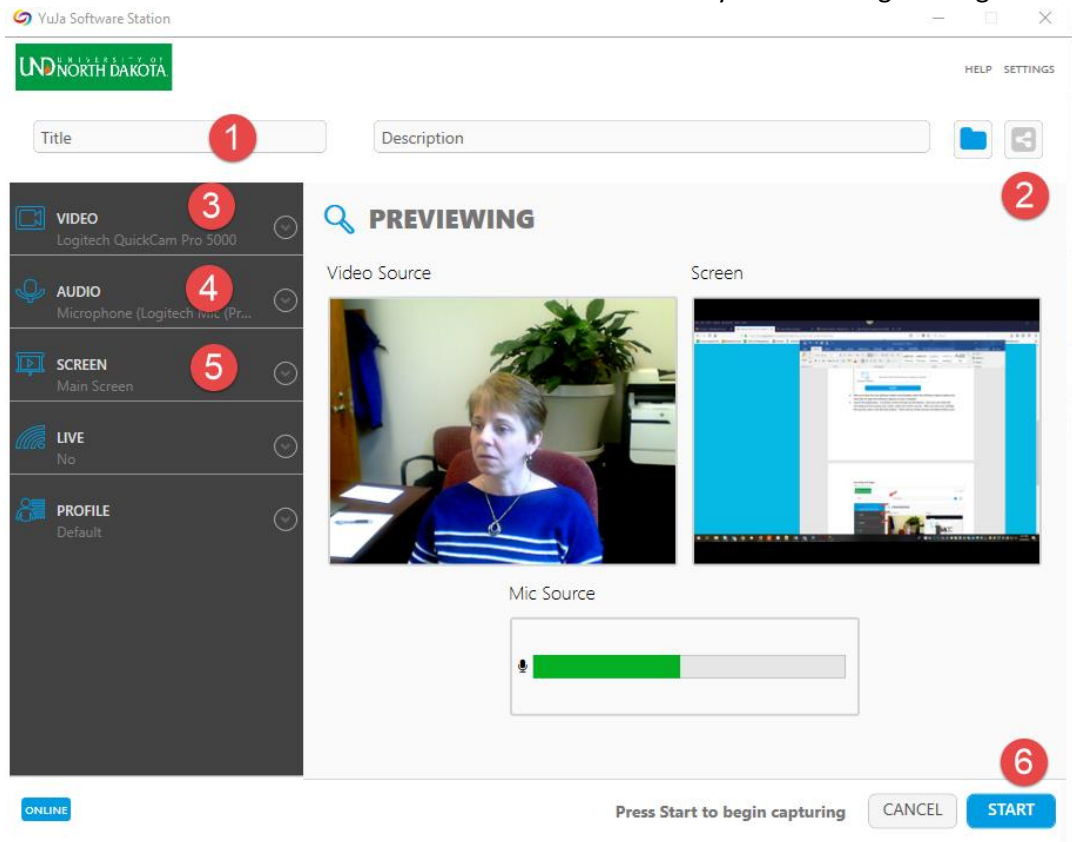

3. The first time you launch the recording, you will need to click the download link to download the YuJa Software Station.

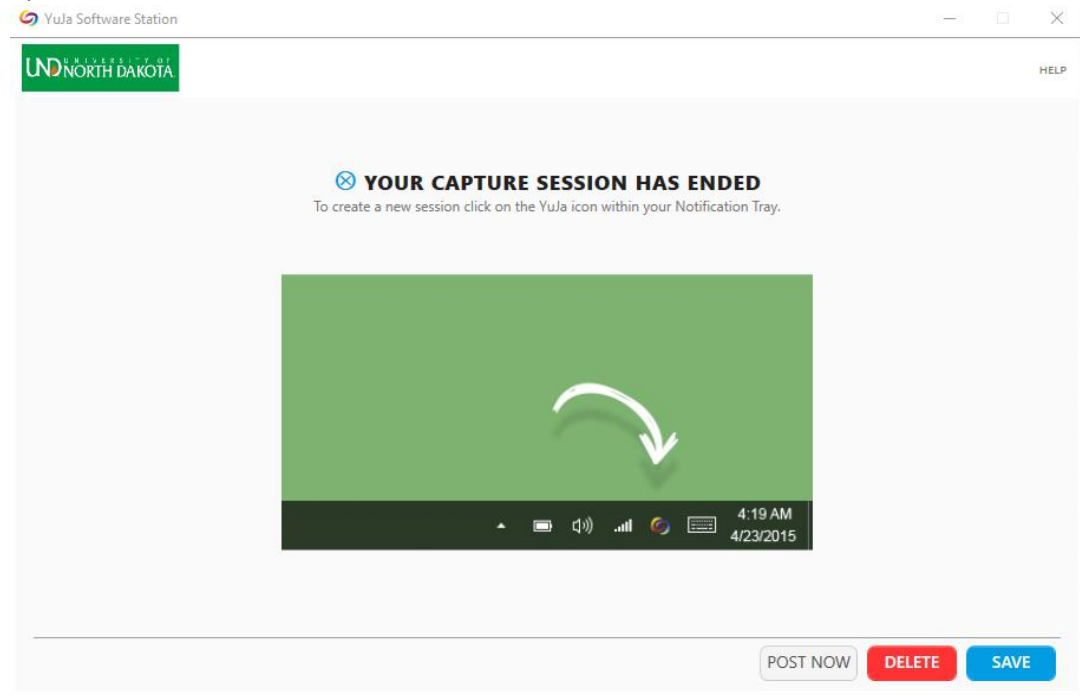

4. After you have the YuJa Software Station downloaded, select the Software Capture option and click Start to open the Software Capture on your computer.
5. Launch the Application. A preview screen will pop up (see below). Follow the steps below to set up your capture:
 1. Give the capture a title.
 2. Select the course that you are wanting to post the capture in.
 3. Select your video output
 4. Select your audio output
 5. Select your screen capture area

6. Click Start. There will be a three second countdown before your recording will begin.

6. As you are recording, you will see your controls in the bottom right corner of your screen. It will give you the option to open the YuJa Software Station in full preview mode, stop or pause your recording and looks like this: .
7. When you are done recording, you will click the stop button. The following screen will appear where you can either Post Now, Save or Delete you capture. You will choose the Post Now

option.

8. Your capture will begin processing and will automatically post to the course channel.
