

Ask Meaningful Questions

A(n) _____ farm specializes in growing crops.

1. Arable
2. Commercial
3. Intensive
4. Pastoral

Farm Type	Percentage
Arable	40%
Commercial	23%
Intensive	17%
Pastoral	20%

The key to keeping students engaged and involved is asking the right questions. Student response technology can provide the tools for interactive lectures, but utilizing the system to its full potential takes more than “yes,” “no” and fact recall questions.

Asking meaningful questions that permit students to employ critical thinking or reveal interesting results will encourage interaction, collaboration and communication. Seeing instant feedback will allow instructors to understand and address the needs of students in real-time.

Which of the following is NOT a characteristic field technique of ethnography?

1. Participant observation
2. Interview schedule
3. Genealogical method
4. Problem-instigating research
5. All of the above techniques are characteristic of ethnography.

Technique	Percentage
Participant obs.	30%
Interview sched.	10%
Genealogical meth.	47%
Problem-instigat.	3%
All of the above	10%

Basic Recall Questions

Ask students to recall facts or concepts.

- Used to assess student understanding of material.
- Conduct pre- and post-testing to gauge lecture effectiveness.
- Ensure students have an understanding before moving on to next topic.

DYLAN'S PARENTS HAD A PARTY FOR HIS FIFTH BIRTHDAY. THEY INVITED BOTH SETS OF GRANDPARENTS, AND DYLAN'S FATHER'S BROTHER AND HIS FAMILY. THIS IS CALLED A GATHERING OF:

1. a consanguine family
2. a conjugal family
3. an egalitarian family
4. a patriarchal family

Family Type	Percentage
1	23%
2	13%
3	23%
4	40%

Conceptual Understanding

Asks students to not only recall definitions but understand concepts associated with definitions.

- Base incorrect answers on common misconceptions to spark rich discussion.
- Learn what students do NOT understand about concepts or content.
- Responses that are split among answer choices allow for further conversation.
- Promotes long-term understanding versus short-term memorization.
- “Which of the following is NOT an example or characteristic of concept X?”
- “Which of the following statements best explains the concepts of X?”

Before administering oxygen therapy at 60% face mask, the nurse would:

1. Review the patient's history for indications of COPD
2. Observe the patient's respiratory pattern
3. Draw ABGs
4. Auscultate bilateral breath sounds

Action	Percentage
1	30%
2	13%
3	27%
4	30%

Application Questions

Asks students to apply knowledge and understanding of concepts to a particular situation or context.

- Predict ways students will misapply a concept and integrate into answer choices.
- If significant number answer incorrectly, ask for an explanation of reasoning.
- Particularly useful when discussing case studies, allow for argument of choices.
- “What would your response to a situation be if you had the role of X?”

Procedural Questions

Asks students to apply knowledge of a procedure or technique to a problem or situation.

- Focus on the outcome of the procedure or the procedure itself.
- Reveal parts of the procedure that students do not understand.
- “In this scenario, what step or steps would you take next?”

Ask Meaningful Questions

Treatment of fibromyalgia with gabapentin will most likely result in the following effect:

1. Improvement in pain severity
2. No improvement in sleep and vitality
3. Improvement in tender point pain threshold
4. None of the above

Option	Percentage
1. Improvement in pain severity	39%
2. No improvement in sleep and vitality	23%
3. Improvement in tender point pain threshold	20%
4. None of the above	27%

Prediction Questions

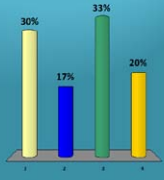

Asks students to predict the result of an experiment or procedure.

- Committing to a prediction beforehand allows students to be invested in answers.
- The larger the percentage of error, the more the students will want to hear the explanation.
- Creates a “time for telling” in which students are ready and interested to learn.
- Helps students make sense of a concept, allows instructors to see if the concept is understood.
- “How will adding X affect the outcome of the situation?”

Photovoltaic panels and solar thermal collectors are used by the active solar techniques to bind the solar energy. The argument above assumes that:

1. Active solar techniques are those techniques that waste solar energy
2. Photovoltaic panels and solar thermal collectors have the ability to bind the solar energy
3. Active solar techniques do not make use of solar techniques for harnessing the solar energy
4. Solar thermal collectors are good collectors of solar energy

Option	Percentage
1. Active solar techniques are those techniques that waste solar energy	30%
2. Photovoltaic panels and solar thermal collectors have the ability to bind the solar energy	17%
3. Active solar techniques do not make use of solar techniques for harnessing the solar energy	33%
4. Solar thermal collectors are good collectors of solar energy	20%

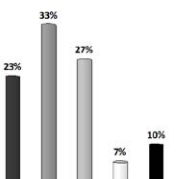

Critical Thinking Questions

Asks students to analyze relationships among multiple concepts or make evaluations based on particular criteria.

- Think critically about complex questions and suggested answer choices.
- Follow-up results with discussion regarding reasoning behind answer choices.
- Re-vote after discussion has taken place to see if answers have changed.
- Construct follow-up questions on-the-fly, focus on why answers were chosen.

Six days ago, a 2-year old boy had a temperature of 40.0°C (104.0°F). No specific cause was found. His fever has persisted and he now has injected conjunctivae, strawberry tongue, dry fissured lips, erythema and desquamation of his hands and feet, and bilateral cervical adenopathy. Which of the following is the most likely complication of this condition?

1. Chorea
2. Congestive Heart Failure
3. Coronary Artery Aneurysm
4. Mesenteric Arteritis
5. Valvular Heart Disease

Option	Percentage
1. Chorea	23%
2. Congestive Heart Failure	33%
3. Coronary Artery Aneurysm	27%
4. Mesenteric Arteritis	7%
5. Valvular Heart Disease	10%

One-Best Answer Questions

Asks students to answer multiple-choice questions that do not have a single correct answer. Calls for critical thinking versus recalling facts.

- Think critically about the best answer among several defensible ones.
- Allows for discussion of choices among students, engaging versus assessing.
- Ask a question, allow students to suggest their own answers and vote for the best one.
- Often applied in medical scenarios, asking for the best treatment of a patient.

The instructor's effectiveness in teaching today's lesson was:

1. Very Good
2. Good
3. Fair
4. Poor
5. Very Poor

Option	Percentage
1. Very Good	20%
2. Good	30%
3. Fair	23%
4. Poor	17%
5. Very Poor	10%

Presentation Assessment Questions

Ask students to evaluate presentations, projects or events. Provides valuable feedback, especially when planning for future events.

- Offer multiple levels of quality or satisfaction in several categories.
- Create questions based on pre-determined, pertinent objectives.
- Keep surveys short and sweet, provide a mid-point for ranking.
- Balance different question types within survey, define necessary terms.

Ask Meaningful Questions

What could be done to improve this online course?

Open-Ended Questions

Ask students to answer open-ended, free response questions. For use with ResponseWare and ResponseCard NXT devices.

- Elicit multiple responses, for use if unsure how students will respond.
- For use if there is a large amount of possible responses, supports brainstorming.

What is your personal view of workers?

1. People are generally lazy, dislike work, need direction and only work hard when pushed to perform well.
2. People are not intrinsically lazy, and are willing to work hard when the right conditions prevail.

Perspective Questions

Ask students questions designed to surface perspectives versus assess knowledge of subject. Help to get to know students and base direction of presentation or lecture on results.

- Gather useful information about students, tailor lecture to student answers.
- Learn where students stand on sensitive topics, do not rely on assumptions.
- Anonymous polling works best with perspective questions, collect honest answers.
- Collect student demographic information, opinions and personal experiences.
- Make topics relatable, opens up discussions when similar experiences are shared.

In the previously discussed scenario, there was "no reasonable" justification for kettling.

1. True, with high confidence
2. True, with low confidence
3. False, with low confidence
4. False, with high confidence

Confidence Level Questions

Ask students to clarify level of confidence along with answer choices.

- Including confidence level will assess student knowledge and discern students "guessing."
- Ask students to assess confidence when completing a task, "How confident would you be X?"
- Ask students confidence level at beginning to identify needs or material that needs covered.

Considering class size, the instructor's responsiveness to students' questions is

1. appropriate
2. too heavy
3. too light

Monitoring Questions

Asks students to gauge lecture or course progress so instructors can monitor effectiveness of current teaching methods.

- Create a benchmark for instructors to compare student progress.
- See what methods are working or what strategies are being implemented.
