Biomedical Engineering Minor

Build your knowledge to help launch the next generation of medical breakthroughs.

Today's health issues will be solved with tomorrow’s diagnosis, monitoring, surgical and therapy technologies. With this undergraduate minor, you'll build a foundation for entering the biomedical device field.

| Program type: Minor |
| Format: On Campus   |
| Est. time to complete: 2-3 years |
| Credit hours: 27 |

Why earn a biomedical engineering minor at UND?

From amazing medical technology featured in sci-fi movies, to the futuristic-like devices in today's most advanced hospitals, it will take experts that can fuse engineering and medicine to imagine tomorrow's innovations. Biomedical engineers create life-saving devices that can:

- Create artificial organs
- Automate monitoring of vitals
- Assist in surgeries
- Simulate procedures
- Build medical advancements once considered science fiction

Our program covers biomedical topics in a variety of areas: biomechanics, biomaterials, bio-instrumentation, multi-scale, bio-simulation and modeling, bio-signals and other emerging areas.

Create the next generation of medical devices by bridging the gap between engineering and medicine. Most importantly, you'll gain the foundation to pursue further education and research to help create new medical devices that can help improve the healthcare outcomes of lives all around the world.

Biomedical Engineering at UND

- Designed to focus on areas where biomedical engineering expertise is most needed.
- Gain exposure to a wide range of biomedical engineering areas.
- Collaborative research with faculty of UND's School of Medicine & Health Sciences, College of Engineering & Mines and NDSU's College of Engineering.
- Help develop intellectual property to generate company spin-offs, attract new companies and economic development.

Biomedical Engineering Jobs

95K Median pay for biomedical engineers

- U.S. Bureau of Labor Statistics

4% Projected job growth in the next 10 years

- U.S. Bureau of Labor Statistics

Biomedical engineers will see an employment growth due to new technology and increasing applications to medical equipment and devices.
Demand will continue to grow as the baby-boom generation grows older and stays more active. There will be more need for biomedical devices and procedures such as hip and knee replacements.
