This online graduate program offers a chance to elevate your existing cybersecurity knowledge foundation to a new level. Gain expertise in a variety of cybersecurity fronts, including network architectures, data operations and security, wireless sensor networks, penetration testing, and many other mission-critical areas. Gain access to significant UND computer resources and technologies, including the Secure Cyber Physical Energy Systems & Data Sciences Laboratory. Stay abreast of emerging and evolving technologies that may be vulnerable to cyber attacks, such as the plethora of Internet of Things devices.
