Accelerated Online Public Health Degree

UND's accelerated public health program allows you to pursue a bachelor's degree (B.S.) and master's degree (M.P.H.), shortening the time required to earn a master’s degree.

Online Bachelor's in Public Health

The Public Health Education bachelor's program is based on a strong foundation in the health sciences, social sciences and psychology. It prepares you to think critically and scientifically, while enhancing communication skills and leadership experiences with a focus on social justice. You will be exposed to the ethical principles of public health practice in your work with diverse populations.

In the bachelor’s program, you will have:

- **Applied learning experiences.** All students complete a 12-credit internship, engage in service-learning projects, and are encouraged to participate in public health study abroad opportunities.
- **Flexibility and convenience.** UND offers the degree online and prepares students to take the Certified Health Education Specialist (CHES) exam.
- **Comprehensive curriculum.** You are exposed to five core areas of public health: epidemiology, biostatistics, social and behavioral sciences, health policy and management, and environmental health.

Online Master's in Public Health

The Master of Public Health (M.P.H.) degree, accredited by the Council on Education for Public Health, offers three specializations to help you develop necessary skills.

Three specializations help you develop necessary skills:

- **Indigenous Health** provides you with a critical understanding of determinants and solutions to health disparities. UND’s specialization is the only 100% online Indigenous Health program in the world.
- **Population Health Research & Analytics** prepares you to produce convincing and scientifically sound information about population health, evaluate the effectiveness of interventions, and provide the basis for improving health policies and programs.
• **Health Management & Policy** gives you the skills needed to manage health delivery systems effectively and efficiently, analyze health policies, and communicate to affect change in health policy and management.
