

## Device and Method for Sealing Containers

UND Technology 13-18  
 Patent Number US 10,173,460  
 Date of Issuance: 1 August 2019

### Summary

The University of North Dakota has patented a technology for effectively sealing paint containers. The sealing device includes an elongated, preferably rigid housing having a frusto-conical shape. The large diameter end of the housing is generally adapted to be in contact with the lid of a container, while that portion of the frusto-conical housing having a small diameter is adapted to, either directly or indirectly, receive forces. The small diameter end may be further characterized by a projection extending about the longitudinal axis of the device.

### Advantages

- No tools required
- Keeps paint fresher longer
- Economical
- Convenient
- Easy to use

### Inventors

Mr. Michael Lupelow
